Dear Shruti Chavan,

We are pleased to extend to you this formal offer for an Internship position as **Junior Software Developer Intern** at **YuvaIntern**. We were impressed with your background, skills, and enthusiasm, and we believe you will be a valuable addition to our team.

Internship Details:

- **Start Date:** December 14, 2025
- **Duration:** 6 weeks
- **Location:** Remote

Key Responsibilities:

As a **Junior Software Developer Intern** intern, you will work on tasks and projects related to As a Junior Software Developer Intern, you will be responsible for assisting the development team in creating and maintaining software applications. You will work on coding, testing, and debugging software solutions..

Benefits & Learning Opportunities:

Throughout the duration of your internship, you will have the opportunity to:

- Develop practical skills in [relevant skills/tools].
- Gain hands on experience in [specific tasks/projects].

As part of joining our team, you may be required to sign a confidentiality or non-disclosure agreement. You are also expected to comply with all applicable company policies and regulations, which will be provided to you upon commencement.

A handwritten signature in black ink, appearing to read "Kounal".

Kounal Gupta
Founder, YuvaIntern

Weekly Internship Report (For Each Week)

Intern's Name: Shruti Vijay Chavan

Internship Week: Week 1

Company/Organization Name: YuvaIntern

Mentor's Name: Prabhjyot Kaur Juneja

Week 1 Overview:

Week 1 of the Software Junior Developer Internship focuses on understanding and creating a strong foundation for project planning and requirements analysis. In this phase, the primary objective is to design a comprehensive project planning document for a hypothetical software system. The task begins with defining a clear project idea, including its purpose, target users, and core functionalities. It also involves identifying both functional requirements, such as system features and user interactions, and non-functional requirements like performance, security, and usability. Additionally, this week emphasizes risk assessment by recognizing potential challenges and suggesting effective mitigation strategies. A structured timeline is prepared, outlining key milestones, deliverables, and estimated completion periods. Resource planning is also included, covering required tools, technologies, skills, and effort estimation. The overall goal is to simulate a real-world software planning process. By the end of the week, all findings are compiled into a well-organized document. This helps in building a clear roadmap for successful project execution in future stages.

Learning Outcome:

In this week, I gained a clear understanding of the importance of project planning and requirement analysis in software development. I learned how to define project goals, identify target users, and differentiate between functional and non-functional requirements. This task also helped me understand risk identification and how to plan mitigation strategies effectively. Additionally, I developed skills in creating timelines, setting milestones, and planning resources such as tools and technologies. Overall, this week improved my ability to think systematically and prepare structured documentation, which is essential for successful software project execution.

Challenges Faced:

One of the main challenges I faced was selecting a suitable project idea with a clear scope and objectives. I also found it difficult to differentiate between functional and non-functional requirements. Creating an accurate project timeline and estimating resources like time, tools, and skills was slightly challenging. Additionally, identifying risks and suggesting proper mitigation strategies required critical thinking. Organizing all the information into a well-structured document was also initially difficult. I overcame these challenges by referring to study materials and planning each section step-by-step.

Goals for Next Week:

My goal for the next week is to create a clear design document and system architecture plan. I will identify key components like front-end, back-end, and database, and understand their interactions. I aim to design a simple architecture diagram and explain data flow between modules. I will also choose a suitable technology stack and organize all details into a well-structured document.

Mentor Feedback and Suggestions:

The mentor appreciated the overall structure and clarity of my project planning document and suggested improving the level of detail in requirements analysis. I was advised to make clearer distinctions between functional and non-functional requirements and to include more real-world examples. The mentor also recommended enhancing the risk analysis section by adding more practical mitigation strategies. For further improvement, I was guided to focus on better organization of content and maintaining consistency in formatting. Overall, the feedback encouraged me to be more precise, detailed, and structured in my documentation.

Additional Notes:

This week helped me build a strong foundation in project planning and documentation. I understood the importance of clarity, structure, and attention to detail while preparing technical documents. Time management played a key role in completing each section effectively. I also realized the importance of continuous learning and referring to examples for better understanding. Overall, this task improved my confidence and prepared me for the next phase of designing and developing the project.

Employer's Feedback:

The intern has shown a good start to the internship by actively participating in the induction and completing the initial assigned tasks. The performance during the week was satisfactory, along with a positive learning attitude and eagerness to understand new concepts. The intern demonstrated basic technical understanding and was able to complete tasks with guidance. With continued effort, consistency, and practice, the intern is expected to improve further and perform at a higher level in the upcoming weeks.

Intern's Signature:

A handwritten signature in blue ink that reads "Shavan".

Date: 20/12/2025

Mentor's Signature:

A handwritten signature in black ink, appearing to be a stylized "A" or "J" with a flourish.

Date: 20/12/2025

Employer's Signature:

A handwritten signature in black ink that reads "Kennel" with a long horizontal flourish extending to the right.

Date: 20/12/2025

Weekly Internship Report (For Each Week)

Intern's Name: Shruti Vijay Chavan

Internship Week: Week 2

Company/Organization Name: YuvaIntern

Mentor's Name: Prabhjyot Kaur Juneja

Week 2 Overview:

Week 2 focused on creating a detailed design document and system architecture for the project. The main objective was to identify key components such as front-end, back-end, and database, and understand how they interact with each other. I worked on designing a high-level architecture diagram to clearly represent the system structure. I also defined the data flow between different modules to ensure smooth communication within the system. This week involved selecting a suitable technology stack based on project requirements and feasibility. I explored different tools and technologies to choose the most appropriate ones. Additionally, I focused on organizing all technical details in a structured and clear format. I improved my understanding of system design principles and component relationships. I also learned how proper planning helps in reducing future development issues. Overall, this week helped in building a strong technical design foundation for the project.

Learning Outcome:

During this week, I learned how to design a system architecture and understand the interaction between different components of a software system. I gained knowledge about creating architecture diagrams and representing data flow clearly. I also improved my understanding of selecting appropriate technologies based on project needs. This week enhanced my ability to think logically and design structured technical solutions.

Challenges Faced:

One of the main challenges I faced was understanding how to design a proper system architecture and represent it clearly in diagram form. It was also slightly difficult to identify all components and define their interactions accurately. Choosing the right technology stack based on requirements required research and comparison. Additionally, explaining the data flow in a simple and clear manner was challenging at first.

Goals For Next Week:

My goal for the next week is to develop a detailed technical document for a selected feature from the project. I will focus on clearly defining the feature's objective and breaking it down into logical steps and functions. I aim to design appropriate algorithms and choose suitable data

structures for efficient implementation. I will also write pseudocode or basic code snippets to represent the workflow of the feature. Additionally, I plan to create flowcharts or diagrams to visually explain the process flow. I will ensure proper handling of errors and consider ways to improve efficiency. Finally, I will organize all the information into a clear, well-structured DOC file with accurate and professional documentation.

Mentor Feedback and Suggestions:

The mentor appreciated my efforts in designing the system architecture and maintaining a structured approach. I was advised to make diagrams more clear and detailed for better understanding. The mentor also suggested improving explanations of data flow and component interactions. I was encouraged to focus more on clarity, accuracy, and proper representation of technical details.

Additional Notes:

This week helped me understand the importance of system design in software development. I improved my skills in creating diagrams and organizing technical information. I also learned the value of selecting the right tools and technologies for a project. Overall, this week increased my confidence in handling design-related tasks.

Employer's Feedback:

The intern has shown good progress during the second week by actively working on system design and architecture tasks. The performance was satisfactory, and the intern demonstrated a positive learning attitude. Basic understanding of system components and design concepts was evident, and tasks were completed with guidance. With continued effort and practice, the intern is expected to improve further and deliver more refined outputs in the coming weeks.

Intern's Signature:

Weekly Internship Report (For Each Week)

Intern's Name: Shruti Vijay Chavan

Internship Week: Week 3

Company/Organization Name: YuvaIntern

Mentor's Name: Prabhjyot Kaur Juneja

Week 3 Overview:

Week 3 focused on feature development and creating a code prototype for a selected feature from the project. The main objective was to understand how a feature is designed at the coding level without actual implementation. I selected one key feature and analyzed its objective and functionality. I worked on breaking the feature into logical steps and defining required functions. I also designed algorithms and selected suitable data structures for efficient processing. Pseudocode and basic code snippets were prepared to represent the logic clearly. Additionally, I created flowcharts to explain the workflow of the feature. I ensured proper error handling and considered performance improvements. All the information was organized into a structured technical document. Overall, this week helped in understanding coding logic and software design at a deeper level.

Learning Outcome:

During this week, I learned how to convert a feature idea into a structured technical design. I gained knowledge about writing algorithms, selecting appropriate data structures, and creating pseudocode. I also improved my understanding of process flow through diagrams and flowcharts. This week enhanced my logical thinking and problem-solving skills. Additionally, I learned the importance of clear and detailed technical documentation.

Challenges Faced:

One of the main challenges was selecting the right approach to design algorithms for the feature. Writing clear and accurate pseudocode was slightly difficult at first. Choosing appropriate data structures and ensuring efficient logic required careful thinking. Creating flowcharts to represent the process flow clearly was also challenging. I overcame these challenges by practicing, referring to examples, and revising my work step-by-step.

Goals for the Next Week:

My goal for the next week is to develop a comprehensive software testing and quality assurance (QA) plan for the project. I will focus on identifying key functionalities from the requirements and design documents that need to be tested. I aim to understand and apply different testing methods such as unit testing, integration testing, and system testing. I will create sample test

cases with clear steps and expected outcomes. Additionally, I plan to define performance, security, and usability testing strategies. I will also set proper metrics and benchmarks to measure software quality. Finally, I will organize all the details into a clear, structured, and professional DOC file.

Mentor Feedback and Suggestions:

The mentor appreciated my effort in explaining the feature logic and maintaining a structured approach. I was advised to improve the clarity of algorithms and make pseudocode more precise. The mentor also suggested enhancing flowcharts for better visual understanding. I was encouraged to focus on optimization techniques and error handling in more detail.

Additional Notes:

This week helped me understand the importance of planning before actual coding. I improved my skills in writing algorithms and organizing technical content. I also realized that proper documentation makes complex logic easier to understand. Overall, this week increased my confidence in handling development-related tasks.

Employer's Feedback:

The intern has shown good progress during Week 3 by actively working on feature development and technical documentation. The performance was satisfactory, with a positive learning attitude and willingness to understand coding concepts. The intern demonstrated basic knowledge of algorithms and logical structuring and was able to complete tasks with guidance. With continued effort and practice, the intern is expected to improve further and deliver more efficient and detailed work in the coming weeks.

Weekly Internship Report (For Each Week)

Intern's Name: Shruti Vijay Chavan

Internship Week: Week 4

Company/Organization Name: YuvaIntern

Mentor's Name: Prabhjyot Kaur Juneja

Week 4 Overview:

Week 4 focused on developing a detailed software testing and quality assurance (QA) plan for the project. The main objective was to ensure that the application meets all functional and non-functional requirements. I started by reviewing the project requirements and design documents to identify important features that need testing. I worked on defining various testing methods such as unit testing, integration testing, and system testing. I also explored both manual and automated testing approaches. Sample test cases were created with proper steps and expected results. Additionally, I included performance, security, and usability testing considerations. I defined key metrics and benchmarks to evaluate the quality of the software. I focused on organizing all the testing strategies in a structured and clear format. This week helped me understand how proper testing ensures software reliability. It also improved my knowledge of quality standards and testing processes. Overall, this week was important for learning how to deliver a high-quality and error-free software product.

Learning Outcome:

During this week, I learned the importance of software testing and quality assurance in the development process. I gained knowledge about different types of testing and when to apply them. I also learned how to design test cases and define expected outcomes. This week improved my understanding of performance, security, and usability testing. Overall, it enhanced my ability to ensure software reliability and quality. Additionally, I developed skills in identifying bugs and improving system performance through proper testing methods. I also understood how structured QA planning helps in delivering a more efficient and user-friendly application.

Challenges Faced:

One of the main challenges was understanding different testing techniques and applying them correctly. Designing detailed and accurate test cases required careful thinking. Identifying proper metrics and benchmarks for quality evaluation was also slightly difficult. Additionally, ensuring coverage of all aspects like performance, security, and usability was challenging. I overcame these issues by referring to study materials and reviewing examples.

Goals for the Next Week:

My goal for the next week is to develop a detailed technical analysis document focused on code debugging and refactoring. I will start by understanding a hypothetical codebase and identifying common issues such as inefficient logic, poor readability, and redundant code. I aim to analyze potential bugs and performance problems and prepare a clear diagnostic report. I will also create a step-by-step plan for debugging, including methods to identify and fix errors effectively. Additionally, I plan to explore refactoring techniques like modularization, code simplification, and optimization of algorithms. I will compare code before and after refactoring using pseudocode to show improvements. Finally, I will organize all findings into a structured and professional DOC file with clear explanations and technical accuracy.

Mentor Feedback and Suggestions:

The mentor appreciated my structured approach to the QA plan and clear documentation. I was advised to add more detailed test cases and improve clarity in testing steps. The mentor also suggested including more realistic scenarios for better understanding. I was encouraged to focus more on performance and security testing aspects.

Additional Notes:

This week helped me understand the importance of testing in delivering high-quality software. I improved my skills in creating test plans and organizing technical documents. I also learned that proper testing reduces errors and improves user satisfaction. Overall, this week increased my confidence in handling QA-related tasks.

Employer's Feedback:

The intern has shown consistent progress during Week 4 by actively working on software testing and QA planning. The performance was satisfactory, with a positive learning attitude and attention to detail. The intern demonstrated a basic understanding of testing concepts and was able to complete tasks with guidance. With continued effort and practice, the intern is expected to further improve and contribute more effectively in upcoming tasks.

Weekly Internship Report (For Each Week)

Intern's Name: Shruti Vijay Chavan

Internship Week: Week 5

Company/Organization Name: YuvaIntern

Mentor's Name: Prabhjyot Kaur Juneja

Week 5 Overview:

Week 5 focused on code debugging, refactoring, and technical analysis of a hypothetical codebase. The main objective was to identify common coding issues such as inefficient algorithms, poor readability, and redundant code. I worked on analyzing potential bugs and performance problems within the system. I created a diagnostic report to highlight key problem areas and their impact. I also developed a step-by-step debugging plan to identify and resolve issues effectively. Additionally, I explored refactoring techniques like modularization, simplifying complex code, and improving code structure. I used pseudocode to compare code before and after refactoring for better understanding. This week also emphasized improving code maintainability and performance. All the analysis and findings were documented in a structured format. Overall, this week helped in understanding how to optimize and maintain clean code.

Learning Outcome:

During this week, I learned the importance of debugging and refactoring in software development. I gained knowledge about identifying code issues and improving performance. I also understood different debugging techniques and how to apply them effectively. This week improved my ability to write clean, readable, and maintainable code. Additionally, I learned how refactoring helps in enhancing code quality without changing its functionality.

Challenges Faced:

One of the main challenges was identifying hidden bugs and performance issues in the code. Understanding how to improve complex and poorly written code required careful analysis. Applying appropriate refactoring techniques and maintaining code logic was slightly difficult. Creating meaningful comparisons between original and improved code using pseudocode was also challenging. I overcame these difficulties by practicing and referring to examples.

Goals for the Next Week:

My goal for the next week is to create a comprehensive final report by integrating all the work completed in previous weeks. I will combine project planning, system design, feature development, testing, and debugging into one structured document. I aim to ensure smooth

flow and proper connection between all sections. I will also write a reflection section to analyze my learning experience, challenges, and improvements. Additionally, I plan to develop a future roadmap that includes new features, enhancements, and long-term maintenance strategies. I will focus on making the document clear, detailed, and professionally organized. Finally, I aim to present the entire project in a complete and well-structured DOC file.

Mentor Feedback and Suggestions:

The mentor appreciated my analytical approach and structured documentation. I was advised to provide more detailed explanations of refactoring techniques. The mentor also suggested improving clarity in debugging steps and including more practical examples. I was encouraged to focus on writing cleaner and more optimized solutions.

Additional Notes:

This week helped me understand the importance of maintaining clean and efficient code. I improved my skills in debugging and analyzing code issues. I also learned that proper refactoring enhances code readability and performance. Overall, this week increased my confidence in handling real-world coding problems.

Employer's Feedback:

The intern has shown steady progress during Week 5 by actively working on debugging and refactoring concepts. The performance was satisfactory, with a positive learning attitude and willingness to improve coding skills. The intern demonstrated basic understanding of code analysis and was able to complete tasks with guidance. With continued effort and practice, the intern is expected to further enhance their technical skills and deliver more optimized solutions in future tasks.

Weekly Internship Report (For Each Week)

Intern's Name: Shruti Vijay Chavan

Internship Week: Week 6

Company/Organization Name: YuvaIntern

Mentor's Name: Prabhjyot Kaur Juneja

Week 6 Overview:

Week 6 focused on final project integration, reflection, and planning the future roadmap. The main objective was to combine all previous work, including project planning, system design, feature development, testing, and debugging, into one comprehensive document. I worked on organizing all sections in a logical and structured manner to ensure smooth flow between them. I also created a reflection section to analyze my learning experience, challenges faced, and improvements made throughout the internship. Additionally, I developed a future roadmap that includes potential enhancements, new features, and long-term maintenance strategies. I focused on maintaining clarity, consistency, and proper formatting in the final document. This week helped in understanding how to present a complete project professionally. Overall, it marked the conclusion of the internship with a well-documented and integrated project report.

2. Learning Outcome:

During this week, I learned how to integrate different phases of software development into a single cohesive document. I improved my understanding of project documentation and presentation skills. I also learned the importance of reflection in identifying strengths and areas for improvement. This week enhanced my ability to plan future improvements and think strategically about project growth. Overall, it strengthened my confidence in handling complete project lifecycles.

3. Challenges Faced:

One of the main challenges was integrating all previous work into a single well-structured document. Maintaining consistency and proper flow between different sections required careful planning. Writing a meaningful reflection and identifying key learning points was slightly difficult. Creating a realistic and detailed future roadmap also required thoughtful analysis. I overcame these challenges by reviewing previous work and organizing content step-by-step.

4. Mentor Feedback and Suggestions:

The mentor appreciated the overall effort in compiling and presenting the complete project. I was advised to improve the clarity of transitions between sections. The mentor also suggested

adding more detailed insights in the reflection part. I was encouraged to make the future roadmap more specific and technically detailed.

5. Additional Notes:

This week helped me understand the importance of proper documentation and presentation of a complete project. I improved my ability to organize and summarize large amounts of information. I also learned that reflection and future planning are essential for continuous improvement. Overall, this week gave me a clear understanding of the full software development lifecycle.

6. Employer's Feedback:

The intern has successfully completed the final week by integrating all project phases into a comprehensive report. The performance was satisfactory, with a consistent learning attitude and dedication throughout the internship. The intern demonstrated a good understanding of the overall development process and was able to complete tasks with guidance. With continued effort and practice, the intern is expected to apply these skills effectively in real-world projects.

Student Diary (Log) Recording Format

Week	Task Assigned	Activities Performed	Key Learnings	Additional Remarks
1	Project Planning and Requirements Analysis	Defined project idea, identified functional & non-functional requirements, performed risk analysis, created timeline and resource planning, prepared structured document	Learned project planning, requirement analysis, risk identification, and documentation skills	Initial phase; built strong foundation in software planning and documentation
2	Design Documentation and Architecture Planning	Identified system components (frontend, backend, database), created architecture diagram, defined data flow, selected technology stack	Learned system architecture design, component interaction, data flow, and technology selection	Improved technical understanding and system design skills
3	Feature Development and Code Prototype	Selected feature, designed algorithms and data structures, wrote pseudocode, created flowcharts, documented workflow	Learned algorithm design, pseudocode writing, logical thinking, and process flow representation	Enhanced problem-solving and coding logic skills
4	Software Testing and Quality Assurance Plan	Defined testing strategies (unit, integration, system), created test cases, identified performance & security testing, set QA metrics	Learned software testing methods, test case design, QA planning, and quality evaluation	Improved understanding of software quality and testing processes
5	Code Debugging, Refactoring, and Technical Analysis	Analyzed hypothetical codebase, identified bugs and inefficiencies, created debugging plan, applied refactoring techniques, compared code using pseudocode, documented analysis	Learned debugging methods, code optimization, refactoring techniques, and improving code readability and performance	Strengthened analytical thinking and code improvement skills
6	Final Project Integration, Reflection, and Future Roadmap	Integrated all phases (planning, design, development, testing, debugging), prepared final report, wrote	Learned project integration, documentation, reflection, and	Final phase; gained complete understanding of software

		reflection, created future roadmap with enhancements and maintenance strategies	future planning strategies	development lifecycle

CERTIFICATE OF COMPLETION

This certifies that

SHRUTI CHAVAN

has successfully completed the internship program for **Junior Software Developer Intern** at **YuvaIntern**.

Throughout the course of this internship, they have demonstrated dedication, professionalism, and a keen willingness to learn and grow. Their accomplishments and contributions have been highly valued by the entire team at **YuvaIntern**.

We commend their hard work and congratulate them on this achievement. We wish them every success in their future endeavors.

Supervisor Evaluation of Intern

<Organization Letter Head>

Student Name: Shruti Vijay Chavan

Date: 26 January

Work Supervisor: Prabhjyot Kaur Juneja

Title: Mentor

Organization: Junior Software Developer Internship

Address: 58/D, First Floor, Off S.G. Barve Marg, Kamgar Nagar, Kurla (E), Mumbai 400024.

Dates of Internship: From 14 December 2025 To 25 January 2026

Please evaluate intern by indicating the frequency with which you observed the following behaviors

Parameters	Needs Improvement	Satisfactory	Good	Excellent
Behaviors			✓	
Performs in a dependable II Manner		✓		
Cooperates with co-workers and supervisors	✓			
Shows interest in work				✓
Learns quickly		✓		
Shows initiative	✓			
Produces high quality work		✓		
Accepts responsibility	✓			
Accepts criticism			✓	
Demonstrates organizational Skills		✓		
Uses technical knowledge and Expertise	✓			
Shows good judgment		✓		
Demonstrates creativity/originality			✓	
Analyzes problems effectively			✓	
Is self-reliant		✓		
Communicates well	✓			
Writes effectively			✓	

Has a professional attitude		✓		
Gives a professional Appearance			✓	
Is punctual		✓		
Uses time effectively			✓	

Overall performance of student intern (circle one):

(Needs improvement/ Satisfactory / Good / Excellent)

Sr. No.	This experience has	1 Poor	2 Average	3 Good	4 Very Good	5 Excellent
1.	Given me an opportunity to explore a career field			✓		
2.	Allowed me to apply classroom theory to practice			✓		
3.	Helped me develop my decision making and problem solving skills			✓		
4.	Expanded my knowledge about work world before permanent employment			✓		
5.	Helped me develop my written and oral communication skills			✓		
6.	Provided a chance to use leadership skills (influence others, develop ideas with others, simulate decision making and action)			✓		
7.	Expanded my sensitivity to ethical implications of work involved			✓		
8.	Made it possible for me to be more confident in new situations			✓		
9.	Given me a chance to improve my interpersonal skills			✓		
10.	Helped me learn to handle responsibility and manage my time wisely			✓		
11.	Helped me discover new aspects of myself that I did not know existed before			✓		
12.	Helped me develop new interests and abilities			✓		
13.	Helped me clarify my career goals			✓		

14.	Provided me with contacts which may lead to future employment			✓		
15.	Allowed me to acquire information and/or use equipment not available at my college			✓		

- How well were you able to accomplish the initial goals, tasks and new skills that were set down in your learning contract? In what ways were you able to take a new direction or expand beyond your contract? Why were some goals not accomplished adequately?

I was able to accomplish most of the goals and tasks from my learning contract, including project planning, design, testing, and documentation. I developed new skills such as system design, algorithm writing, and understanding QA processes. I also expanded my knowledge by improving problem-solving and learning beyond the given tasks. Some goals were not fully achieved due to limited time and less focus on practical coding. Overall, the experience helped me grow technically and improved my understanding of the software development process.

- In what areas did you most develop and improve?

I developed and improved mainly in system design, technical documentation, and problem-solving skills. I gained a better understanding of software development phases, including planning, testing, and debugging. My ability to write clear algorithms, create diagrams, and organize structured documents also improved. Additionally, I became more confident in analyzing problems and thinking logically to find effective solutions.

- What has been the most significant accomplishment or satisfying moment of your OJT?

The most significant accomplishment of my OJT was successfully completing the final integrated project report by combining all phases such as planning, design, development, testing, and debugging into one structured document. It was a satisfying moment to see how all my weekly efforts came together into a complete project. This achievement boosted my confidence and gave me a clear understanding of the full software development lifecycle.

- What did you dislike about the OJT?

One aspect I disliked about the OJT was the limited hands-on coding experience, as most tasks focused on documentation. Understanding some concepts without practical implementation was challenging, and documentation work was sometimes time-consuming. However, it helped improve my patience and understanding.

- Considering your overall experience, how would you rate this OJT? Satisfactory / Good / Excellent:

Considering my overall experience, I would rate this OJT as **Good**. It provided valuable knowledge about the software development lifecycle and improved my technical and documentation skills. Overall, it was a helpful and learning-oriented experience.

- Give suggestions as to how your OJT experience could have been improved? (Could you have handled added responsibility? Would you like more discussions with your professor concerning your OJT? Was closer supervision needed? Was more orientation required?)

The OJT experience could be improved by including more hands-on coding tasks along with documentation work to enhance practical skills. More regular discussions with the mentor or professor would help in better understanding and clearing doubts. Additionally, a slightly more detailed orientation at the beginning and closer guidance during complex tasks would make the learning process more effective.
